Should we import grid energy now?

This action requires your approval. Based on current system conditions, I have prepared a grid import action for your review:

Import 8 MW from the grid

Target: Kuppam Solar Site KUP-SOLAR-001 · Grid connection: KUP-GRID-01 · Snapshot: 14:32 IST

Awaiting Admin Action

Reason: Solar generation is below forecast and battery cannot cover the full shortfall.

EXPECTED IMPACT

Demand Coverage	Grid Reliability	Estimated Cost	Interruption Risk
Fully Covered	97%	₹12,000	Low

Why approval required: All grid actions above 6 MW require approval under your current settings.

Approve | Approve with Changes | Reject | Ask BOB | Preview Impact

Modify Action Parameters

Approved Amount	Duration	Maximum Cost
6 MW	15 min	₹12,000

Administrator Comment / Justification

Keep battery storage above 55% and preserve automatic discharge up to 6 MW.

Updated Impact Preview: Lowering import from 8 MW to 6 MW reduces projected reliability from 97% to 94%. Estimated cost drops to **₹9,000**. Battery policy remains unchanged: automatic discharge up to 6 MW, approval required above 6 MW, and a 55% reserve. Approval expires in 15 minutes.
