Action selected: Discharge battery to support demand

Objective configured Edit

Maintain supply reliability

Controlled asset configured Edit

Battery 1 — Available · 72% · 8 MW max

Trigger configured Edit

Demand gap 3 MW for 5 min

Safety limits configured Edit

Max 6 MW · 30 min · 55% reserve

Automation configured Edit

Automatic within limits

Recovery behavior configured Edit

Request approval to import up to 4 MW

Notifications configured Edit

Approval required, action started, safety limit approaching, action paused, action stopped, action completed, action failed, data connection lost

7 of 7 settings completed. Ready to test.

Require approval above 4 MW.

AI label

I can update the automatic discharge limit. The proposed change is not yet applied to effective policy.

Automatic discharge limit

Effective policy	Automatic up to 6 MW · approval above 6 MW
Proposed — not applied	Automatic up to 4 MW · approval above 4 MW

Effective policy remains automatic discharge up to 6 MW, approval above 6 MW, configured reserve 55%, manufacturer recommendation 50%, and immutable floor 30%. The proposed change lowers automatic discharge to 4 MW and lowers approval to above 4 MW.

Apply change | Modify | Cancel

Explain the 55% reserve.

AI label

The 55% minimum reserve protects 11 MWh of stored energy for emergency use. If Battery 1 reaches 55%, I will stop discharging and seek alternative supply from the grid.

The equipment manufacturer recommends a minimum reserve of 50%. The current 55% setting provides an additional safety margin. Effective policy remains unchanged until the proposed limit is applied.
